

# GPRSoft®

The user friendly alternative for  
GPR data post-processing!

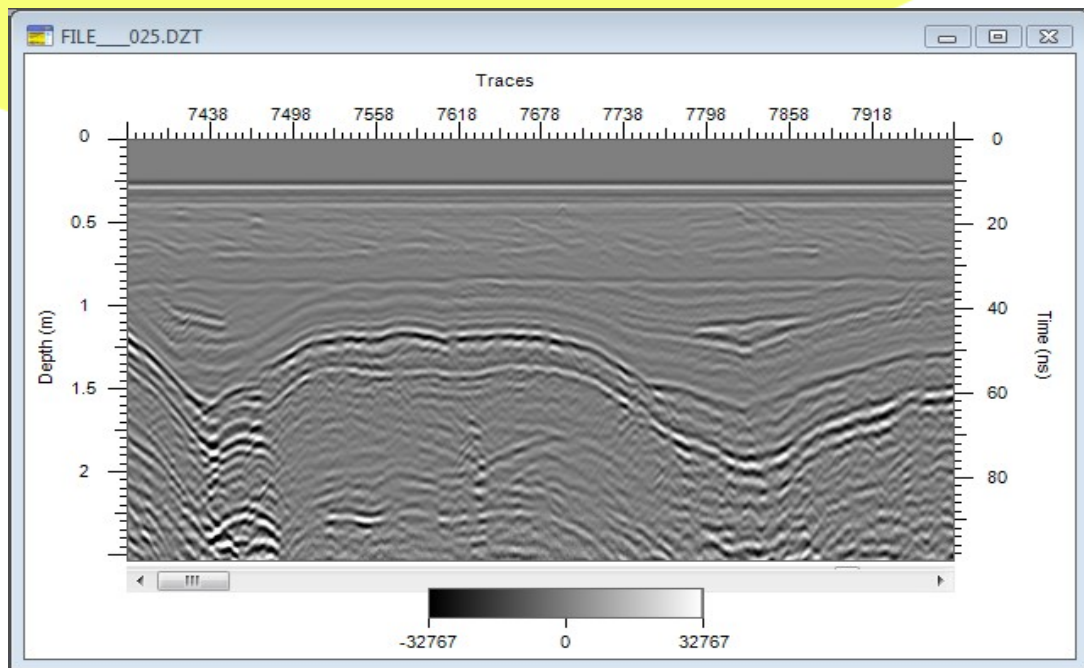

All the tools, All the speed, All the functions,  
All Compatible with Windows Vista®

Geoscanners AB

**GPRSoft®** is the affordable and user friendly solution for displaying, post-processing and interpreting ground penetrating radar data. The software has been divided into logical complexity levels to deliver the required processing functions depending on the demands of the applications.

The modern user interface and the 100% compliance with Windows® guidelines for human interfaces guarantees a safe and easy work that focus on the task and not on the used tools.

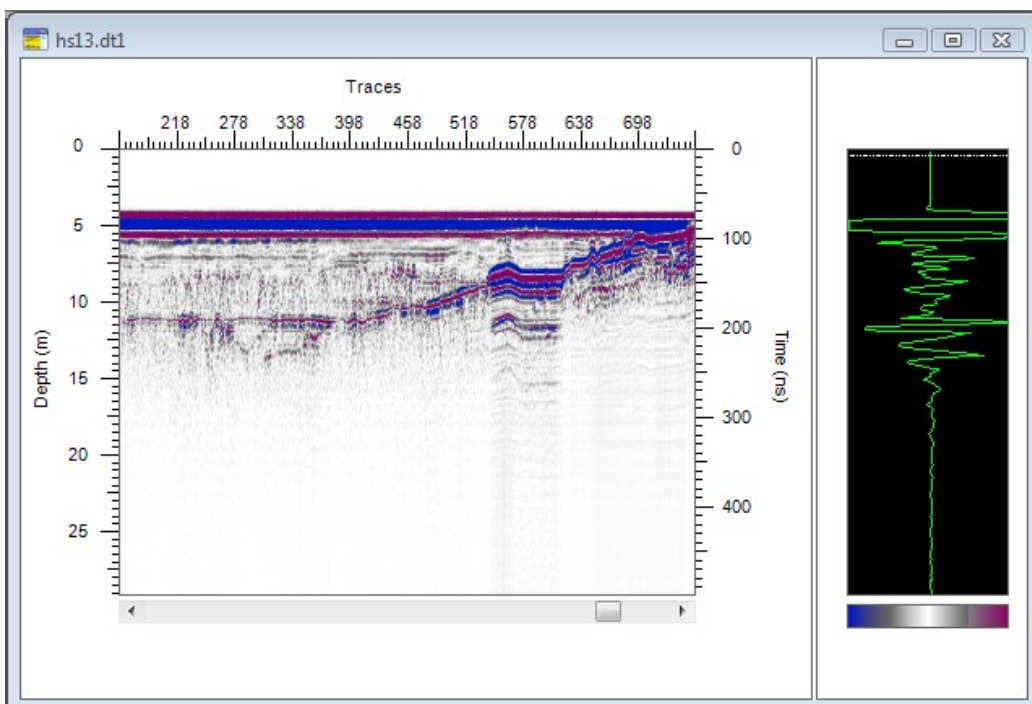

### Why is better?

- User friendly GUI fully compatible with the latest Microsoft Windows Vista® environment. It won't become obsolete tomorrow or the next year.
- Support for all major GPR equipment manufacturer data file formats. This is constantly tested and improved.
- True integration of GPS data positions with the GPR data files. This integration is performed seamlessly reflecting the experience of Geoscanners in the field.
- Unlimited amount of undo and redo operations to correct and compare the outcome of dsp processing steps.
- Visually improved filter selection and possibility to change the filter type on the fly.
- Uncompromising operations that do not affect the original files. The original files are left untouched until saving to them.

## What other bonuses do I get?

- A fast zoom capability not seen in any other gpr software package.
- An immediate screen result of your processing operations, as a difference to other popular software packages where one must wait for the entire file to be redrawn.
- A novel and powerful palette creation tool.
- Direct PDF creation without the need of buying expensive pdf creators. The full PDF printout is completely under your control.
- An outstanding support and plenty of tutorial and how to presentations.

## What about the licenses?

GPRSoft® can be bought as a standalone computer fixed license or with a USB hardware key. The latest allows you to use the software in any computer as long as the hardware key is inserted in any of the available USB ports of that computer.

Both licenses give you right to obtain minor and major updates for a period of twelve months. An extended service agreement can be bought as part of a maintenance program.

**Request your demo today and try for yourself how GPRSoft® can dramatically improve your way of doing GPR data processing!**
